

## **Net Zero Commitment Statement**

### **Our Commitment**

At Solar Dynamics, we recognise the urgent need to address climate change and the role we play in creating a more sustainable future. We are committed to achieving net zero greenhouse gas (GHG) emissions by 2050 or earlier, in line with global efforts to limit warming to 1.5°C above pre-industrial levels.

Our goal is not only to reduce our own carbon footprint but also to empower our customers, partners, and communities to accelerate the global transition to clean energy.

---

### **Our Approach**

Achieving net zero requires consistent, measurable progress. Solar Dynamics is taking proactive steps to reduce emissions across our operations, supply chain, and product lifecycle. Our strategy focuses on three key pillars:

#### **1. Reduce**

- Transitioning our operations to 100% renewable electricity.
- Improving energy efficiency across facilities, logistics, and production.
- Investing in low-carbon technologies and operational innovations.

#### **2. Engage**

- Collaborating with suppliers and partners to reduce upstream and downstream emissions.
- Engaging employees in sustainability initiatives and training.
- Supporting policies and programs that drive the renewable energy transition.

#### **3. Offset and Innovate**

- Offsetting residual emissions through credible, verified carbon removal projects.
  - Investing in innovation and research that accelerates decarbonisation in our sector.
-

## **Tracking Progress**

We are developing a detailed roadmap with interim targets to guide our progress toward net zero. This includes:

- Annual measurement and disclosure of GHG emissions.
- Short- and medium-term reduction goals aligned with the Science Based Targets initiative (SBTi).
- Transparent reporting to ensure accountability and continuous improvement.

---

## **Looking Ahead**

Reaching net zero is a journey that requires collective action, innovation, and dedication. Solar Dynamics is committed to leading by example—demonstrating that a cleaner, more resilient, and equitable energy future is not only possible but essential.

Together, we can power the world sustainably.
